rediStore

RediStore is a cloud-based service that provides enterprise-class file and object storage—ideal for storing unstructured data such as email, video, and music. Object storage is more cost-effective and scalable than traditional enterprise storage, making it ideal for offsite backup or corporate file sharing. With rediStore, scale up to petabytes of cloud storage for just dollars per terabyte, without hidden fees or capital expenditures.
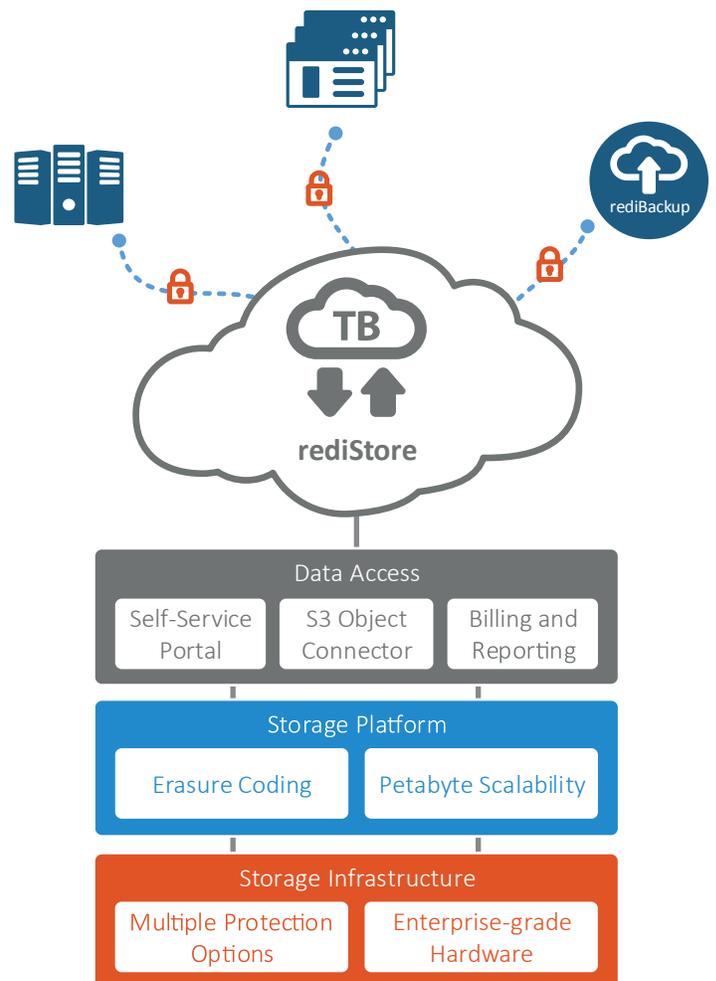

Protect Your Business

Customer, financial, and other important data must be retained and easily accessible for any number of reasons, including audit and compliance. With data growing at an exponential rate, storing it all can be challenging and costly. Let rediStore safeguard your data away from your premises while making it easy to retrieve at a moment's notice.
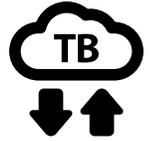

Make Storage Simple

RediStore is ideal for storing and retrieving unstructured data that is expensive to archive, search, and retrieve with traditional storage. RediStore provides 100% compatibility with Amazon S3-based apps, so that you can easily move workloads to rediStore without modifying application code.

Make Storage Cost-Effective

You can economically store backups, database dumps, log files, and other information that rarely change. At the same time, you can store active files and retrieve them instantly at a flat, low cost per terabyte. Eliminate nagging service fees and unpredictable charges.

rediStore

Enhance Business Resiliency

RediStore improves business resiliency in several ways. It provides 99.999% availability for stored data, for anytime, anywhere accessibility. Every object deposited in rediStore also is encrypted during transit, reducing security vulnerabilities. All data is protected locally with options for replicating the data to other rediCloud datacenters.

Scale As Needed

Because rediStore provides object storage instead of traditional hierarchical storage, we can instantly scale storage to meet your most demanding requirements. We make it significantly easier to store and manage large data sets—up to hundreds of petabytes of data.

Ultra-High Uptime and Resiliency

RediStore was designed with high availability and protection at the server, rack, and data center levels. A single instance is protected locally with erasure coding for high resiliency. Data can be replicated to another (or multiple) rediCloud data centers to protect against geographic disasters. With rediStore, you achieve 99.999% availability without the high costs of traditional enterprise storage.

Predictable Costs

RediStore is priced at a flat, low cost per terabyte, with no fees for bandwidth in, bandwidth out, or object requests. There are no hidden charges. No large menus with hundreds of options. You can grow or shrink your storage buckets as needed, move data as you wish, and know exactly what your costs will be at the end of the month.

Connection Compatibility

Object storage is only useful when you can easily communicate with the storage platform. RediStore is 100% compatible with the Amazon S3 API preventing the need to rewrite existing application code. RediCloud supports 3rd party cloud connectors and gateways for connectivity to CIFS/NFS and other file protocols.

Massive Scalability

The sky is the limit with rediStore. We easily scale to thousands of nodes and hundreds of petabytes of data, giving you almost unlimited flexibility.

About rediCloud

RediCloud makes cloud services simple, practical, and affordable for businesses of any size. Built on industry-leading, best-of-breed infrastructure, our comprehensive cloud solutions help firms improve their competitive advantage. With rediCloud, customers can accelerate critical initiatives, extend capabilities, simplify operations, and gain big-business agility without a big-business price tag. In addition, companies can rely on 99.999% uptime and high performance for critical applications. RediCloud exceeds expectations by delivering excellent service with a no-excuses attitude and a commitment to customer success. For more information visit redicloud.com.
